Growing Cents: Operational Known Issues v1.0

A log of known architectural behaviors and logic limitations for the current UAT build.

1. Known Tactical Issues

Issue ID	Module	Description	Workaround
:---	:---	:---	:---
KI-001	PDF Engine	Slight delay (3-5s) in rendering "Elite" charts on low-resource nodes.	Display "Intelligence Rendering" loader.
KI-002	2FA	Email dispatch lag in specific regional nodes.	Implement "Resend Token" after 60s cooldown.

KI-003	Dashboard	Safari browsers exhibit minor pinstripe flicker in "Audit Mode".	Use Chrome/Edge for high-command oversight.

2. Logic Limitations

- **Bulk Reset**: Resetting staging data via `migrate:fresh` wipes the local `.env` cache; re-run `php artisan key:generate`.
- **Multi-Club Edit**: Concurrent editing of a single assessment by two club agents may trigger a `409 Conflict`.
