Growing Cents: Payment Scope & Webhooks

Strategic blueprint for mock-payment integration and webhook handling payloads.

Subscription Tiers (Mock Scope)

Tier	Capabilities	Monthly Yield (USD)
:---	:---	:---
Basic Institutional	Single-node audit, basic roadmap	$49.00
Elite Financial	Multi-node, Advanced Strategic AI, PDF Exports	$149.00

Global Command	Full API access, Webhooks, Multi-region governance	$299.00

Webhook Protocol: `subscription_active`

Payload Schema:

```
 json

{

  "event": "subscription.activated",

  "data": {

    "subscription_id": "SUB-7821-GC",

    "club_id": 412,

    "plan_tier": "Elite",

    "expires_at": "2027-03-17",

    "transaction_ref": "TXN_MOCK_99827"

  },

  "signature": "SHA256_HASH_REDACTED"
```

```
}
```

Webhook Protocol: `subscription_renewed`

Payload Schema:

```
 json

{

  "event": "subscription.renewed",

  "data": {

    "subscription_id": "SUB-7821-GC",

    "new_expiry": "2028-03-17",

    "amount_yielded": 14900

  }

}
```

Internal Refund Logic

If a club requests a strategic retreat (refun), the following protocol is invoked:

1. **Mark Subscription**: `status = 'refunding'`
2. **Revoke Elite Access**: Downgrade logic at middleware layer.
3. **Verify Yield Correction**: Audit log entry for financial rollback.

Handling Logic

1. **Validate Signature**: Ensure payload originates from the verified yield stream.
2. **Check SubscriptionID**: Prevent double-entry in the ledger.
3. **Update Institutional Status**: Reactivate club features immediately.
4. **Log to Audit Trail**: Store yield success event.
